

Activity: Pandemic

Instructions and tasks

This learning box imitates fictionally and in a very simplified way the work of AI systems that are supposed to predict epidemics or pandemics. For this purpose, the working methods of international AI projects were linked to a map of Africa that the US Department of Defence created in 2020, based on the central factors triggering Covid 19. The students analyse the various factors and thus predict the outbreak of a new pandemic. They recognise that the factors can only be collected to a limited extent and that a sufficient number of factors is necessary for a prediction.

The activity can be used in the area of 'Ethics and society' or 'Fields of application'. The students work in pairs or in small groups and evaluate the individual factors. Depending on the evaluation, suitable coins are distributed to the countries. The prediction of a pandemic outbreak is based on the number of coins.

Task to print out:

Where can you predict the next pandemic outbreak?

How It Works

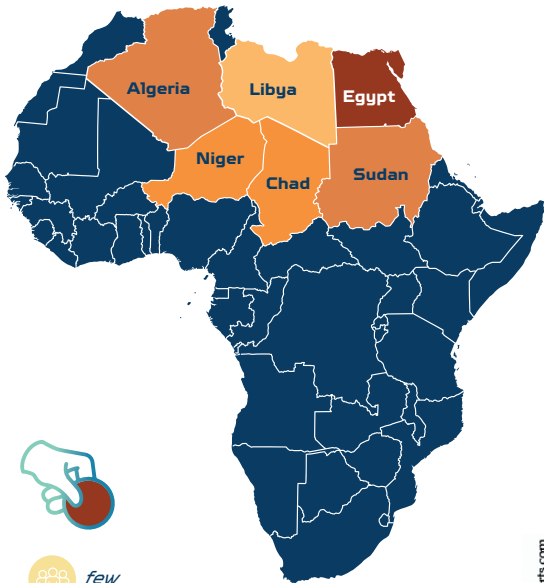

- 1. Look at the factors:**      
- 2. Distribute the coloured coins to the countries:**
Note: Look at the colour coding of the countries on the cards
- 3. Which country is most at risk?**
(The more dark coins, the more danger!)

Factor:
Urbanisation

How many people live in the cities?

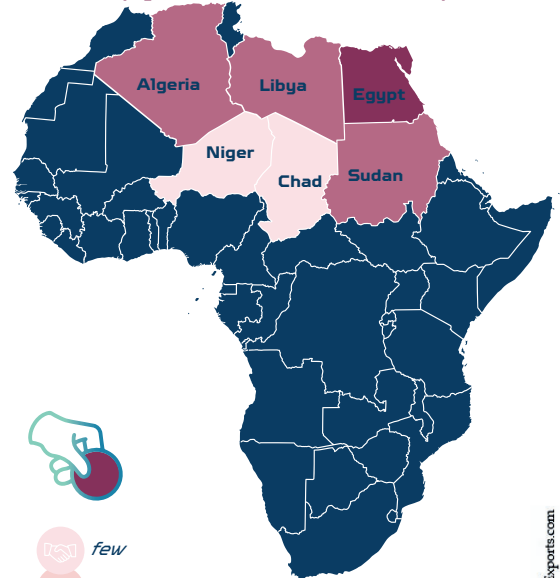

Data: World Bank, World Exports.com

Factor:
Contact to other Countries

How strong is the country internationally connected with other countries?

[higher risk of infection from abroad]

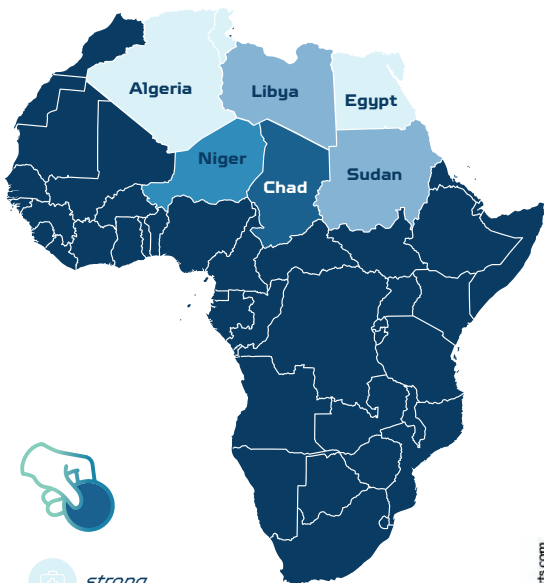

Data: World Bank, World Exports.com

Factor:
Quality of the Healthcare System

How strong and efficient is the healthcare system?

Data: World Bank, World Exports.com

Factor:
Freedom of the Press

How free is the press of political pressure?

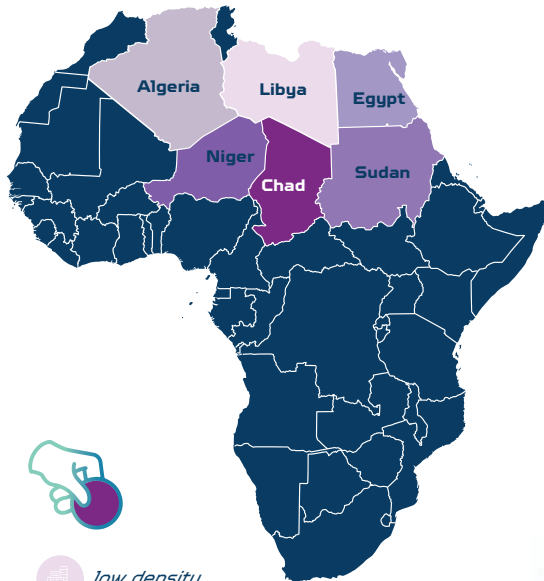

Data: World Bank, World Exports.com

Factor:
Density of Urban Area

How densely populated
are the cities of a country?

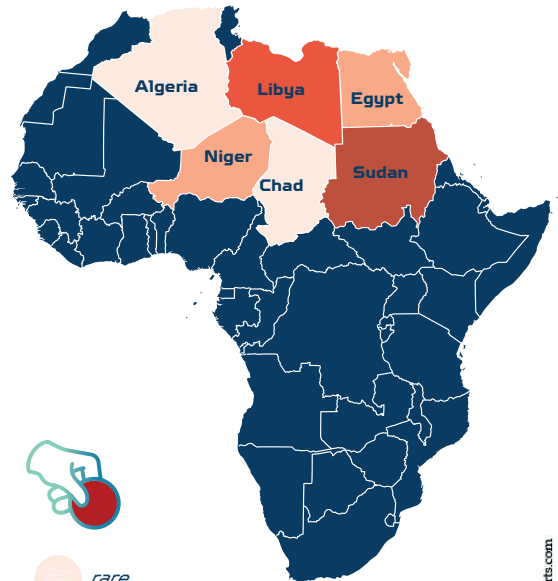

Data: World Bank, World Exports.com

Factor:
Number of Conflicts

How often are there
wars and conflicts?

Data: World Bank, World Exports.com

Factors:

Contact with other Countries

Density of Urban Areas

Quality of the healthcare system

Number of Conflicts

Freedom of the Press

Urbanisation
